Some families may have one child eligible for Medicaid and another child eligible for the free CHIP program or one child eligible for free CHIP and another child eligible for subsidized CHIP due to the children's ages. Please see the example below.

Example: Family size of four with net earnings of \$19,500 a year

One child is 3 years old and one child is 16 years old. Based upon the chart above, the 3-year old falls below the net income level for someone of his or her age. This child would qualify for Medical Assistance. The child who is 16 years old falls within the eligible income range, which would make this child eligible for CHIP. Therefore, two children in one family may be eligible for two different public health programs.
